

Project Assessment Mathematical Underpinnings

Important information

The groups may consist of either one or two people. Two-person groups will have additional tasks/examples, indicated by *italic* text in the instructions. The project theme can be freely chosen out of the three without any restrictions. The deadline for the decision is the same as for the checkpoint.

The instructions are in files: projectA, projectB, projectC.

Points will be awarded for

- (5 points) a checkpoint - upload a file named SurNam or SurNam_SurNam (if the group is a two-person group) on Github (there will be a folder called "checkpoint") with a name of a chosen project and 2-3 sentences describing the progress
- (10 points) a report - min 2 - max 4 pages describing the results. If you have faced any problems in any part of the project, please provide a description of the issue and its potential underlying cause (e.g. why something didn't work).
- (10 points) a presentation - prepare a brief presentation lasting approximately 8 minutes (the duration of your presentations will be measured, and the final length of all presentations will be announced when the total number of groups is known). The presentations will be held during the last two labs.
- (10 points) the substantive content of the project
- code (doesn't have to be clean)

Please zip the report, presentation, and file(s) with code into one folder named as your checkpoint file and upload it to the 'project/submissions' folder on github.

Important dates

- 15.05.2024 a checkpoint
- 02.06.2024 a deadline for sending a report
- 05.06.2024, 12.06.2024 - presentations
