

# Mathematical Underpinnings of ML

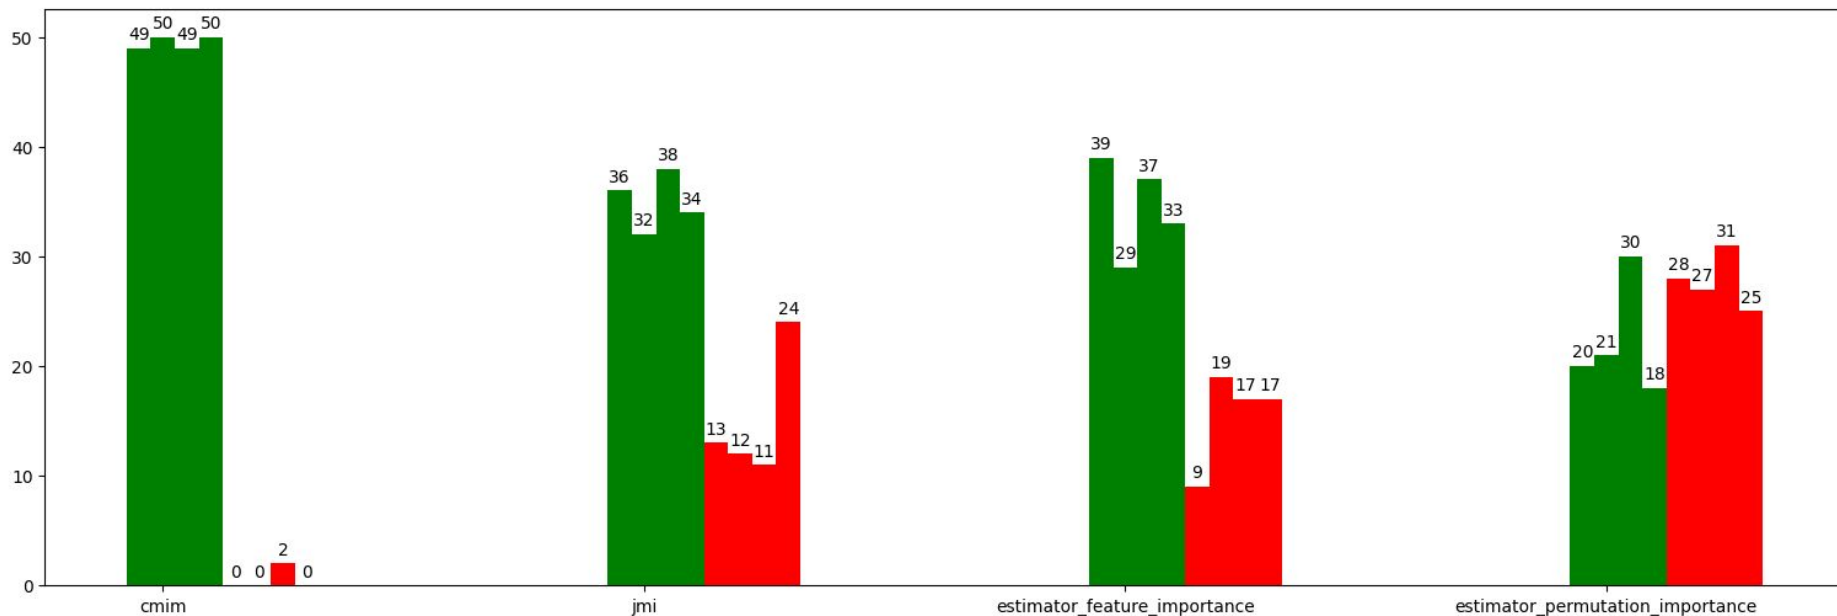

Feature Selection

Ivan Mialeshka

# Methods

- JMI
- CMIM
- Random forest feature importance
- Random forest permutation importance

# Artificial data (high sparsity)

# Artificial data (low sparsity)

# Real-world datasets

- **Musk (Version 2)**
  - features=166
  - samples=6598
- **Breast Cancer Wisconsin (Diagnostic)**
  - features=30
  - samples=569
- **Optical Recognition of Handwritten Digits**
  - features=64
  - samples=5620

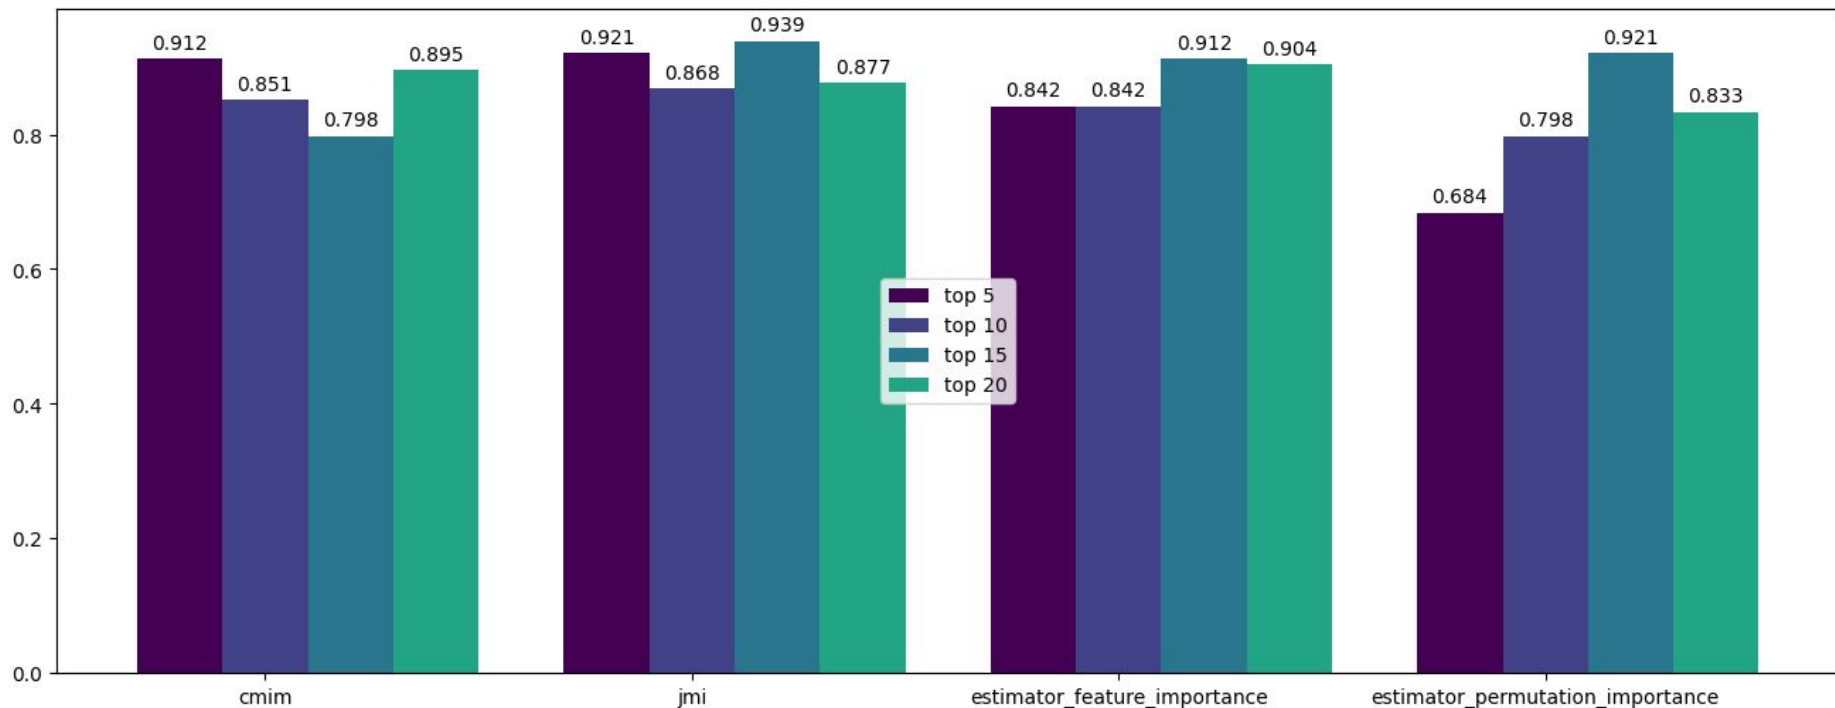

# Classifier

```
return nn.Sequential(  
    nn.Linear(in_features, hidden_state),  
    nn.ReLU(),  
    nn.Linear(hidden_state, hidden_state),  
    nn.ReLU(),  
    nn.Linear(hidden_state, classes),  
    nn.Softmax() if classes > 1 else nn.Sigmoid()  
)
```
